DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-13, drawn to a compound.

Group II, claim(s) 14, drawn to a method to decrease excess intestinal water and electrolytes.

Group III, claim(s) 15-17, drawn to a method of regulating cell proliferation.

Group IV, claim(s) 18, drawn to a method to augment nutrient transport.

Group V, claim(s) 19, drawn to a method to regulate lipolysis.

Group VI, claim(s) 20, drawn to a method to regulate blood flow.

Group VII, claim(s) 21-23, drawn to a method to facilitate weight loss.

Group VIII, claim(s) 24-28, drawn to a method of antagonizing the effects of PYY(3-36).

The inventions listed as Groups I-VIII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the compound of group I and the method of weight loss of group VII lacks novelty (i.e., it is anticipated by prior art references)- see, e.g., Batterham, Nature, 2002, vol. 418, pp-650-654. Batterham discloses the infusion of PYY(3-36)decreases appetite and reduces food intake 33% over 24 hours. See, for example, page 650

and figure 4b. Thus, the special technical feature which links the claims does not provide a contribution over the prior art (with respect to groups II-VI and VIII) so unity of invention is lacking.

This application also contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows: the various distinct compounds according to the formulas from among those instantly claimed- see, e.g., claims 1, 8, 9, 10, 11, 12.

Applicant is required, in reply to this action, to elect a single species (i.e., elect a particular formula - with all variables defined - from among those instantly claimed, e.g., in claims 1, 8, 9, 10, 11, 12) to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election. Applicant is required to select one fully defined species, to include all defined substituents for prosecution on the merits.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an

election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.
